Q: ST\_Intersects geometry fails, even though there are no overlaps I am having some troubles with the ST\_Intersects function in postgis. I have a bunch of lines, and I want to know if a line intersects another line. Here is an example of the data I have (First line is the line I want to intersect with the second line, the third line shows the result I want to get) I tried the following : `SELECT ST_intersects(t_line.geom,t_line_dual.geom) AS 'TRUE' FROM "test"."line" as t_line LEFT OUTER JOIN "test"."line_dual" as t_line_dual ON ST_Intersects(t_line.geom,t_line_dual.geom) ORDER BY t_line.id DESC` I tried a lot of ways to get this to work, but nothing is working. What I want is that I can compare all of the geometries and get TRUE or FALSE. Does anybody know how I can achieve 2d92ce491b
