Category:2013 software Category:Video game development software Category:Video game engines Category:Windows-only softwareFor developers and businesses, one of the greatest challenges in the modern world is to keep up with the pace of technology. But as any IT geek will tell you, it's hard to know what's coming next, and that often leads to a risk of being left behind. As such, the search for more effective ways of gaining an edge is a constant quest for organisations. This, according to a survey by the User Experience Design Studio that revealed that most people no longer feel confident about being ahead of their peers. And despite the fact that they were confident they would be able to find new jobs in the future, with 47% of developers and 44% of business managers expecting the need for more skilled developers, 60% of people said that they felt that employers were not prepared to meet the challenge. In the UK, 30% of respondents said they experienced feelings of social isolation because of their technical knowledge, with 28% of them saying that they were dissatisfied with the options available to them. As well as the need to update skills, respondents were also clear that the need to collaborate was an important factor in gaining their desired future employment, with 27% saying that they needed to work with people who knew more than they did. As a result of these findings, it's clear that finding a way to keep pace with the evolving ways of working is one of the greatest challenges facing organisations today. Reinventing the way we work This has led to the emergence of a new type of workplace in which technology is being used to reinvent the way in which organisations operate. One of the fastest growing areas of development is in the use of Augmented Reality (AR) to provide a more immersive experience to individuals and businesses alike. It's a technology that has grown in popularity as a means of improving the way in which individuals communicate and collaborate, with AR games such as The Sims and Angry Birds being adapted as a way of developing the skills of individuals and providing a new way of communicating that relies on much more than just text or pictures. The truth is, we are experiencing a 'second industrial revolution', where the replacement of a number of traditional roles is being replaced by the use of technology to take over those tasks, leaving employees more time for creative work and to
