Many clinicians use cephalometric radiographs to predict the future orthodontic treatment outcome of Class III malocclusion. The objectives of this study were to determine the accuracy of cephalometric radiographs in predicting the future orthodontic treatment prognosis of Class III malocclusion and to evaluate the factors affecting the accuracy of such radiographs. The study involved 135 patients, aged between 7 and 20 years, with Class III malocclusion. The results indicated that the prediction of orthodontic treatment prognosis by cephalometric radiographs has a moderate accuracy in Class III patients ($\kappa=0.530$). The prognosis was less accurate in younger patients (12-13 years of age) ($\kappa=0.502$) and in those with more anteriorly placed maxillary or mandibular incisors ($\kappa=0.455$). The position of the condyle, the face, and the soft tissue profile were the most important factors affecting the accuracy of prognosis.20th Century Kids 20th Century Kids is a TV channel and a music video channel in India. The channel is owned by UTV World and broadcasts content from the same UTV network. History 20th Century Kids was launched on 27 September 2017 in India on STAR India.
