## Simple Password Maker

The fully-featured command-line utility that supports numerous password formats, creates highly random passwords on the spot with ease, and seamlessly integrates with popular security tools such as Lastpass and KeePass. It can also use password generators that store passwords in the plain text format. Key features: It has more features than you can believe The program supports all passwords formats, including DES, MD5, SHA1, SHA256, and SHA512. You can also specify the length of the password, including lower and upper case letters, as well as embedding numbers and special characters. To create a password, you may simply press the button "Generate Password," and all the configuration parameters will be automatically filled by default. You may also input the password in the dedicated plain text panel. The password will be displayed as soon as you press the button "Check Password." If you are not sure how to specify the password length, Simple Password Maker has a comprehensive help system available in the form of a built-in tutorial. You can also find out what actions correspond to each button in the primary panel of the tool. Security tools integration With the simple installer you can integrate Simple Password Maker with security tools such as Lastpass and KeePass. The former will remember the generated passwords, while the latter will generate a file with them for future use. Plain text file conversion It can also be used to store generated passwords in the plain text format, which can be opened by any Windows utility. The application supports Unicode, including complex scripts like Devanagari, Bopomofo, and Hangul. It also allows to customize the password format and the length of the password with a simple command-line interface. How does it work? The program uses a command line interface that resembles UNIX. As you type your password, you will be asked to specify the number of characters that you want to include. You may also specify the upper and lower case letters that you would like to see. If you don't want to enter any information, you can simply press the "Generate Password" button to automatically create a random password. When you want to check the strength of the password, you simply click on the "Check Password" button. Simple Password Maker will then display the password in the primary panel and let you copy it to the clipboard. You may then paste it into a third-party utility. Software Requirements
