Use keyboard macros to repeat keyboard combinations KEYMACRO is a simple tool to create keyboard macros. It uses keyboard combinations for repeating actions on your computer. With KEYMACRO, you can perform numerous actions in a quick and easy manner using only one single key. How to install: You can download and install the program directly from the program's homepage. You will be prompted to choose between 32-bit and 64-bit versions. Download and install the file you need. Now you can start using the program. If you have any problems or questions, then do not hesitate to contact the program's authors. Extremely fast, efficient, powerful. The only tool I will use from now on! No muddied water. The interface is very intuitive and smooth. There is no bloatware. The only time I see ads is when I need to contact support. Many great features. The bonus for me was the ability to access the tool from a web browser. This allowed me to use it on my iPod Touch. There is a really handy option to specify what type of data you wish to send (HTTP, FTP, IMAP, FTP/IMAP, PGP/SMTP, Email, etc.). I like that it also provides you with some tips and suggestions when you start typing. I use to use a piece of software called speedbit, but it had a feature that I really liked, called memory leak finder. It was a great feature that did not take up too much space on my HD. I did not find anything like that in KEYMACRO. I don't know if KEYMACRO can do it, but if it can, it does not have a feature like it. I did not know that until I tried to uninstall it, and it was a program that would not let me do that. KEYMACRO is easy to use, and I can tell it has a lot of potential. I installed it on my iPod Touch and it ran smooth and fast. I am pretty new to the tool, but once I got used to it, I can see it being a great tool. I really like the web interface. I can easily access the tool from anywhere and take advantage of the ability to use it on my iPod Touch. The only bad thing about it was that I could not install it on my HD. I was able to put it on a USB drive, but when I plugged it in, it installed the software on my computer 1d6a3396d6
