McAfee Klez Removal Tool is a simple-to-use application designed to scan your computer for the Klez worm and get rid of it. This is a security threat capable of spoofing the From field of your emails and sending messages with itself to email addresses found in the Windows Address Book and in personal text documents, in order to infect others. Klez is a type of worm that can infect an operating system through email attachments or by other means. This type of a virus usually tries to steal your personal information in order to sell it to third parties, but in some cases it can simply make the infected system unusable by slowing down its performance, hiding the desktop icons, and corrupting the Windows Registry. It is more dangerous to Microsoft Office documents, as Klez can create self-replicating documents containing executable code, which could execute when opened, embedding itself on another computer in the local network. Klez is one of the most widespread and dangerous malware types to detect. This virus tries to gain control of infected computers and to re-infect them as frequently as possible, even though it may not be able to infect the very same computer as the first time. The current version of this virus already has more than 10 million victims, and it spreads as quickly as 1 new target every 8 seconds. This simple, high-infection rate, however, masks the scale of this worm. We are now providing an in-depth analysis of this malware that will help you remove it more quickly, easily, and effectively than ever before. There are three varieties of the worm that you can potentially encounter in everyday computing: The Melrose worm, also known as the Melrose virus or the Melrose monkey virus The Klez virus (or simply the Klez worm), a cousin of the Melrose worm The Aworm McAfee Products that can help you deal with this threat McAfee Secure - AntiVirus Engine: McAfee Secure is the new generation of the award winning anti-virus solution from the McAfee security division. Mobile email apps seem to be growing like a mushroom: apps like Citrix ShareFile and Mobile Iron created a buzz for bringing important data to business commuters, and Apple announced in the past year that it will launch its own secure email app. However, there's still a gap in the market for enterprise users who are keen on a mobile email app, and they're looking for enterprise-grade features and support. McAfee Secure Security Manager for Mac is a fast, intuitive, and secure way to manage email for Mac desktops, laptops, and mobile devices. Simple-to-Use User Interface Security Management Management tools are notoriously hard to use and navigate, so McAfee's interface is a breath of fresh air. The simple, clean layout allows users to view and manage mobile data on any device by simply logging in using their email address. It also saves users from having to learn a completely new security management tool by providing intuitive instructions along the way. Secure Backup Management You have probably heard the old saying, "If you haven't backed up your data, you're toast." This doesn't have to be the case if you use McAfee Secure Security Manager for Mac, as it ensures that your mobile data is backed up in the cloud before it's actually moved to your hard drive. It also lets users access this data from any device, and the backup is automatically replicated to other devices like mobile devices and computers. If you lose everything, you can just retrieve your data from your backup and recover your computer, all without having to restore from a backup. Advanced Findings Alerts McAfee Secure Security Manager for Mac provides customers with advanced notifications about possible threats and recommended actions to improve security. For instance, if your device is under attack, this app will give you a notification alert and help you take necessary precautions to ensure that your device remains protected.
