

Hello, I am working on a product that uses the HASP4 driver. On Windows XP it is the Alladin HASP Key driver version 5.18 and everything works. On Windows Vista, the Alladin HASP Key driver does not work. What to do? There are some problems with the driver for the HASP4 system, at the moment all the possible problems are fixed (as far as we managed to understand), but in Windows Vista the driver can be broken. In rare cases unstable driver work (black screen, screen flashing) is possible. In case of such problems you should perform the following actions.
