Firestore documentation and made a simple project with a button. What I wanted to do is to create a database and have a node called "users" that will have the details of every user in my app. My app architecture is simple: App delegate, navigation controller, a TabBar Controller and UITableViewController. In my App delegate I put this code in the didFinishLaunchingWithOptions method: let database = Firestore.firestore() database.collection("users").addSnapshotListener { (snap, error) in if let snapshot = snap {
